Lawnflite LS550

6hp Log Splitter

Key Features

1 Log Capacity
The LS550 Log Splitter has the capability to split quickly and efficiently large volumes of logs up to 63.5cm/25" diameter.

2 Engine
The powerful 6hp B&S Engine combined with a splitting force of 25 tonnes means that even difficult wood types i.e. knotted oak can be dealt with.

3 Large Pneumatic Tyres
Large pneumatic tyres and a tow bar means that the unit can be easily transported around the garden (not road legal).

4 Vertical or Horizontal Positions
The LS550 can be used in either a horizontal or vertical position, giving users a choice of what is most comfortable for them.

5 Additional Features
The LS550 also benefits from a jack stand, a 'two handed' safety operating system. After splitting the log, release the handles and the cylinder returns into position automatically. The full cycle is completed in just 19 seconds.
